

Inventory number: 22697

Paper filter facility
ARO P 480/1250 E2

Technical data

Tank contenance	250 l
Flow / duty	80 l/min
Paper filter width	480 mm
Voltage 50 Hz 3x	400 Volt
Length	1700 mm
Width	620 mm
Height	690 mm

belt filters, process or processing fluids such as emulsions, water, oils and solutions can be efficiently cleaned of the solids they contain. The uniquely deep filter bed allows a higher liquid level than with conventional flat bed belt filters. The deflection on the discharge side is set higher, resulting in a drying section. Therefore a very compact filter cake can be built up with our belt filter in connection with a powerful filter fleece. This combination results in an excellent filtration result with low consumption of filter fleece and the smallest possible liquid discharge.
